

## **DELICA SERIES 1/2 PASSENGER SIDE AIRCON PROTECTOR**

This protection is designed to be installed between the existing plastic grill and the airconditioner “radiator” on the passenger side of the Delica (underneath).

Firstly BEWARE, these are hand made from recycled material (hence the price 😊), there are likely to be sharp edges. Please be careful not to cut yourself.

Simply remove the 4 long 12mm bolts from the existing plastic grill. Place the protector plate on top of the plastic grill (line up the holes – there is a locator lug in one corner unless its been broken off). Push the bolts back up, hold the condenser from the top (as it can move up as you’re pushing up) and tighten the bolts. It can be a bit fiddly getting them to start – especially if you’re using a socket which the bolt head recesses into. Simple 😊 well maybe not, but persevere and you’ll get it.

There are pictures of the install and how it looks on the Delicaclub.com forum.

If you run into troubles don’t hesitate to post, or just post to say how easy it was 😊

Cheers!
